

Beetle Caresheet Checklist

- ❶ Enclosures should be at least 2x the length of beetle in all 3 dimensions
 - ❷ Beetles can fly, a lid can prevent escapes but allow ventilation with small holes
 - ❸ Substrate choices: sawdust, wood shavings, tissue, coir
 - ❹ (Optional) Sphagnum moss helps to maintain humidity
 - ❺ Add grip wood or twigs for beetle to reorientate if flipped over
 - ❻ Beetles are solitary, males should be kept separate
 - ❼ Females can be introduced for mating but will shorten the male's lifespan.
 - ❽ Adult beetles consume tree sap, nectar and fruits such as apples and bananas.
Reptile fruit jellies are convenient alternatives, Feed every 3-5 days.
-
- ⚠️ Avoid feeding citrus fruits such as orange/lemon
 - ⚠️ Avoid direct sunlight causing dryness and overheating.
 - ⚠️ Beetles excrete in liquid, renew substrate regularly or when conditions degrade.
